

Alpha Three Complex® Application Rates

The 1st application is the heaviest. The Mycorrhizae is applied during the 1st application and does not need to be repeated, unless the soil has been tilled or disturbed by digging. Maintenance applications are ½ of the original application of Biosol® and Menafee Humate® per year.

Biosol®: 1st Application

Garden Preparation: 2 ounces or 1/3 cup per square yard
8 ounces or 1 1/3 cup per 100 square feet
Vegetables: 1 1/2 ounces per square yard or 3/4 cup
Lawns, Meadows, Pastures: 25 lb per 1,000 square feet

Maintenance of new and existing plantings, lawns, meadows, and pastures after 1st application: 12 lbs per 1,000 square feet per year. Applications should be made every 12 weeks. Divide the total yearly amount needed by the number of applications needed to determine the amount to apply each application; i.e. 1,000 square foot lawn needs 12 lbs per year divided by 3 (9 month growing season) = 4 lbs of Biosol® per application.

Menafee Humate®: 1st Application

Garden Preparation, Vegetables, Lawns, Meadows, Pastures, Maintenance and new plantings:
5 lbs per 1000 square feet.

Maintenance: 2.5 lbs per 1000 square feet per year.

Mycorrhizae:

New planting (1 application) or after tilling or digging.
Plantings: 1/2 ounce per plant
Gardens, lawns, meadows, and pastures: 1 lb per 1000 square feet

If you have any questions, please call the number below. Thank you for using Alpha Three Complex.®
